TRAINING & PRACTICE

OVERVIEW

From Business Need to Value 3

SERVICE CONVERSATION GUIDES

Simple service discovery guides 20–35

DISCOVERY & QUALIFICATION

Listen, discover and qualify 36

ACQUISITION & FIRST APPROACH

Finding and approaching prospects 37

SALES PROCESS & HANDOVER

Stages and technical-team roles 38

EIGHT FICTIONAL CASE STUDIES

Practice across business sectors 39–46

SIX JAYTRIX PROJECT EXAMPLES

Documented systems and scope 47–52

CLIENT OBJECTIONS

Understand concerns and respond 53

DAILY ROUTINE & LEAD TRACKING

Workflow, metrics and lead template 54

PROFESSIONAL STANDARDS & ROLE

Trust, responsibilities and handover 55

QUICK REFERENCE

Client needs and possible services 56

PROJECTS TO CLIENT NEEDS

JAYTRIX examples at a glance 57

ROLE, LEADS & COMMISSION

Role summary and proposed model 58

FINAL SALES PLAYBOOK

Practical client acquisition steps 59

PRACTICE CONVERSATION

Fictional hotel website discussion 60

JAYTRIX SYSTEMS helps businesses and organizations improve operations, customer experience, efficiency and information management through practical technology solutions.

THE SOLUTION JOURNEY

BUSINESS VALUE The agreed improvement the client wants to achieve.
The technical team confirms the workable scope; delivery and support follow the agreement.

SELL THE SOLUTION THAT FITS THE CLIENT

SOFTWARE FIRST

Starts with a tool or feature list before the client's process is understood. This can miss the real need.

SOLUTION FIRST

Starts by understanding the client's current work, difficulty and desired change. Then the team assesses a suitable option.

The representative discovers and communicates the need. Technical colleagues confirm what can be delivered.

HOW TO USE THIS HANDBOOK

1 LEARN

Understand the service groups and examples.

2 DISCOVER

Ask questions; record the actual need.

3 HAND OVER

Confirm scope, price and timing with the team.

JAYTRIX SYSTEMS | Tanzania

DIGITAL PRESENCE & COMMERCE

BUSINESS PROBLEM

Ask: Who visits? Desired action?
What changes? Who approves?

WHO MAY NEED IT

Companies, hotels, schools
restaurants and NGOs

SERVICE MAP FOLLOW THE WORK

BUSINESS

WEBSITE

CONTACT

INQUIRY

Online business pages; solves scattered information for companies, hotels, schools, restaurants and NGOs. Example: fictional hotel organizes room details and inquiries. May include pages, forms, maps, WhatsApp, gallery and editing.

Ask: Who visits? Desired action? What changes? Who approves?

Say: We organize key information online.

Do not promise search rankings, traffic or leads.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Service details are
scattered

POSSIBLE SOLUTION

Business website

VALUE TO EXPLORE

Clearer customer
inquiries

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

DIGITAL PRESENCE & COMMERCE

BUSINESS PROBLEM

Ask products, price updates,
payments, delivery, returns, stock.

WHO MAY NEED IT

Retailers, fashion, electronics
cosmetics and food sellers

SERVICE MAP FOLLOW THE WORK

PRODUCTS

CART

PAYMENT

DELIVERY

Online product browsing and ordering; for retailers, fashion, electronics, cosmetics and food. Fictional Dar retailer organizes online orders. May include catalogue, cart, checkout, accounts, payments and delivery.

Ask products, price updates, payments, delivery, returns, stock.

Say: We explore a store around your order process.

Do not promise payment approval or sales growth.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Orders arrive through
chats

POSSIBLE SOLUTION

Online product and
order flow

VALUE TO EXPLORE

Better order
visibility to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

BUSINESS SYSTEMS & OPERATIONS

BUSINESS PROBLEM

Ask process, users, reports, branches and current tools.

WHO MAY NEED IT

SMEs, distributors
multi-branch businesses

SERVICE MAP FOLLOW THE WORK

Organizes selected workflows; solves disconnected records for SMEs, distributors, service firms. Fictional supplier combines customer, order and payment records.

May include customers, sales, stock, staff, reports, permissions.

Ask process, users, reports, branches and current tools.

Do not promise scope/cost before review.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

BUSINESS SYSTEMS & OPERATIONS

BUSINESS PROBLEM

Ask student count, fee rules, access, reports, internet.

=

WHO MAY NEED IT

Schools, colleges
training centres

SERVICE MAP FOLLOW THE WORK

STUDENTS

ATTENDANCE

FEES

REPORTS

Organizes student/admin records; solves scattered fee, attendance and exam data for schools/colleges. Fictional school needs easier attendance and fee records.

May include students, fees, attendance, exams, parent communication.

Ask student count, fee rules, access, reports, internet.

Do not promise compliance or migration.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

School records are
separated

POSSIBLE SOLUTION

School records and
workflows

VALUE TO EXPLORE

Easier record review

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

BUSINESS SYSTEMS & OPERATIONS

BUSINESS PROBLEM

Ask outlets, order flow, receipts, payments, internet.

WHO MAY NEED IT

Restaurants, cafes, bars
hotels and food outlets

SERVICE MAP FOLLOW THE WORK

POS is point of sale, where a transaction is recorded. Solves paper tickets/unclear totals for restaurants, cafes, hotels. Fictional cafe organizes table orders. May include menu, tables, orders, receipts, users and reports.

Ask outlets, order flow, receipts, payments, internet.

Do not promise hardware/offline/tax links.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

BUSINESS SYSTEMS & OPERATIONS

BUSINESS PROBLEM

Ask products, units, receiving, returns, reorder rules.

WHO MAY NEED IT

Shops, pharmacies
wholesalers and hardware

SERVICE MAP FOLLOW THE WORK

RECEIVE

STOCK

SELL

REORDER

Records purchases, sales and stock; for shops, pharmacies, wholesalers with poor stock visibility. Fictional shop wants clearer stock movement. May include products, purchases, adjustments, alerts and reports.

Ask products, units, receiving, returns, reorder rules.

Do not promise perfect accuracy.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Stock is tracked by
notebook

POSSIBLE SOLUTION

Inventory and sales
records

VALUE TO EXPLORE

Improved stock
visibility to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

BUSINESS SYSTEMS & OPERATIONS

BUSINESS PROBLEM

Ask service, duration, staff, deposits, cancellations.

WHO MAY NEED IT

Salons, clinics, hotels consultants and trainers

SERVICE MAP FOLLOW THE WORK

REQUEST

CALENDAR

CONFIRM

REMIND

Records service requests and times; for salons, hotels, clinics, consultants.
Fictional salon takes stylist/time requests. May include schedules, booking form, confirmation, reminders.

Ask service, duration, staff, deposits, cancellations.

Do not promise calendar/SMS links.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Bookings sit in message threads

POSSIBLE SOLUTION

Booking calendar and reminders

VALUE TO EXPLORE

Fewer scheduling clashes to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

Ask users, task, Android/iOS, internet, why app vs website.

WHO MAY NEED IT

Delivery firms, marketplaces
field and service teams

SERVICE MAP FOLLOW THE WORK

Phone/tablet software for clients/staff; delivery, booking, field teams. Fictional riders update job progress. May include screens, accounts, notifications, agreed data link.

Ask users, task, Android/iOS, internet, why app vs website.

Do not promise app-store approval.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

Ask computers, internet, shared records, printers.

WHO MAY NEED IT

Retail counters, offices workshops and offline sites

SERVICE MAP FOLLOW THE WORK

Computer software for fixed-workstation tasks; counters, offices, workshops.
Fictional workshop has uneven internet. May include staff screens, records, reports and confirmed device support.

Ask computers, internet, shared records, printers.

Do not promise offline sync.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

Ask systems, data, owners, access/docs, error handling.

WHO MAY NEED IT

App teams and platforms
businesses linking tools

SERVICE MAP FOLLOW THE WORK

Backend handles data/rules; API lets software communicate. Needed for shared records and service links. Example: booking app saves requests and checks availability.

Ask systems, data, owners, access/docs, error handling.

Do not promise external access.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

Ask which tools, data, access owner, frequency, main record.

WHO MAY NEED IT

Businesses with POS, stock websites or separate systems

SERVICE MAP FOLLOW THE WORK

WEBSITE

LINK

SYSTEM

RECORD

Connects tools so information can move. For teams copying data between tools.

Example: online orders connect to stock records.

Ask which tools, data, access owner, frequency, main record.

Do not promise all systems can connect.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Staff re-enter the same details

POSSIBLE SOLUTION

Connect agreed systems

VALUE TO EXPLORE

Less repeat entry to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

IT & CYBERSECURITY

BUSINESS PROBLEM

May include domain, hosting, SSL, backup, updates, support.

WHO MAY NEED IT

Website owners, online shops
schools and organizations

SERVICE MAP FOLLOW THE WORK

Domain is site name; hosting is its online home; SSL encrypts connections. Website upkeep/backups. Example: NGO needs clear update responsibility.

May include domain, hosting, SSL, backup, updates, support.

Ask owner, access, backup, support hours. Do not promise 100% uptime.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

IT & CYBERSECURITY

BUSINESS PROBLEM

May include discovery, workflow review, options and recommendations

WHO MAY NEED IT

SMEs, schools and NGOs planning technology changes

SERVICE MAP FOLLOW THE WORK

NEED

REVIEW

OPTIONS

PLAN

Practical advice for SMEs, NGOs, schools unsure what technology fits. Example: firm wants less duplicate entry.

May include discovery, workflow review, options and recommendations.

Ask outcome, tools, failure, affected users, constraints.

Do not promise savings before assessment.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

The business is unsure what fits

POSSIBLE SOLUTION

Review needs and options

VALUE TO EXPLORE

A clearer technology plan

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

IT & CYBERSECURITY

BUSINESS PROBLEM

May include defensive access review, backup planning, recommendations.

WHO MAY NEED IT

Online businesses, schools
teams holding client data

SERVICE MAP FOLLOW THE WORK

Protects systems/data from unauthorized access, loss or disruption. Weak access/backups are business risks.

May include defensive access review, backup planning, recommendations.

Ask who has access, how removed, backups, sensitive records.

Never promise certification or guaranteed protection.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

Example: training center re-enters registrations.

WHO MAY NEED IT

Offices, training centres
sales and service teams

SERVICE MAP FOLLOW THE WORK

Systems handle repeated tasks with less manual effort. For offices/schools/sales teams repeating data entry.

Example: training center re-enters registrations.

Ask trigger, steps, exceptions, approver, existing tools.

Do not promise zero errors.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

SOFTWARE, APPLICATIONS & INTEGRATION

BUSINESS PROBLEM

May include discovery, options, scoped software/integration.

WHO MAY NEED IT

Businesses with unique work or growing system needs

SERVICE MAP FOLLOW THE WORK

NEED

DESIGN

BUILD

SUPPORT

Planned solution when standard tools do not fit a specific workflow. Example: cooperative reviews member/collection process.

May include discovery, options, scoped software/integration.

Ask desired outcome, tried options, users and constraints.

Do not promise feasibility or price before scoping.

CLIENT VIEW | EXAMPLE TO DISCUSS

Current challenge > Possible JAYTRIX option > Business value to explore

CURRENT CHALLENGE

Standard tools do not fit the workflow

POSSIBLE SOLUTION

Scoped custom solution

VALUE TO EXPLORE

Fit to the agreed process

Illustrative only. Ask about the actual client process before recommending a solution.

Technical team confirms scope, price, integrations and timing.

1. WHAT IS IT?

A website is a set of online pages where people can learn about an organization and contact it.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Customers may find scattered, outdated or incomplete information, or have no clear way to enquire.

3. WHO MAY NEED IT?

Companies, schools, hotels, restaurants, NGOs and professional service firms.

4. TANZANIA EXAMPLE

A fictional Zanzibar guesthouse puts room types, location, photos and inquiry details in one place.

5. WHAT JAYTRIX CAN PROVIDE

- Page structure and content layout
- Contact forms, map and WhatsApp links
- Gallery, news or social links
- Content editing options if required

6. BUSINESS BENEFITS

- Present information clearly
- Make contact easier
- Keep key details in one place
- Support customer discovery

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Staff repeat the same answers
- Customers ask for location or service details
- Online information is outdated

8. QUESTIONS TO ASK THE CLIENT

- Who needs to use the site?
- What should visitors learn or do?
- Which pages and languages are needed?
- Who will provide and approve content?
- Do you need forms, maps or WhatsApp?
- Who will update the site after launch?

9. HOW TO EXPLAIN IT TO A CLIENT

We can organize your key business information online and make it easier for people to understand your services and contact you.

10. WHAT NOT TO PROMISE

- Do not promise search ranking, visitor numbers or sales.
- Confirm content, languages, hosting and update needs before quoting.

1. WHAT IS IT?

E-commerce lets customers browse products, place orders and, where agreed, pay online through a website.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Orders, prices, customer details, stock and delivery may be handled in separate chats or records.

3. WHO MAY NEED IT?

Retailers, fashion sellers, electronics shops, cosmetics businesses, food sellers and wholesalers.

4. TANZANIA EXAMPLE

A fictional Dar es Salaam clothing shop lists products and records online orders for staff to confirm.

5. WHAT JAYTRIX CAN PROVIDE

- Product catalogue and search
- Cart, checkout and order records
- Payment or delivery connection if scoped
- Admin and inventory options

6. BUSINESS BENEFITS

- Display products beyond the shop
- Organize incoming orders
- Give customers a guided buying process
- Improve order visibility

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Orders arrive across many message threads
- Product prices or availability are hard to keep current
- Staff manually copy order details

8. QUESTIONS TO ASK THE CLIENT

- How many products and options do you sell?
- How do you update prices and availability?
- How should customers order and pay?
- How will you arrange delivery or collection?
- Who confirms orders and handles returns?
- Must online stock connect to another system?

9. HOW TO EXPLAIN IT TO A CLIENT

We can explore an online store built around how you list products, confirm orders, take payment and arrange delivery.

10. WHAT NOT TO PROMISE

- Do not guarantee payment-provider approval, sales growth or delivery coverage.
- Confirm payments, stock sync, returns and delivery rules with the technical team.

1. WHAT IS IT?

A business management system brings selected business records and tasks into one organized software tool.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Information may be split between notebooks, spreadsheets, messages and disconnected applications.

3. WHO MAY NEED IT?

SMEs, distributors, service companies, multi-branch businesses and organizations with special workflows.

4. TANZANIA EXAMPLE

A fictional Arusha distributor wants staff to record customers, orders, payments and stock movements consistently.

5. WHAT JAYTRIX CAN PROVIDE

- Agreed records and user roles
- Sales, customer or stock workflows
- Search, reports and approvals
- Branch or payment features when scoped

6. BUSINESS BENEFITS

- Reduce repeated manual recording
- Make records easier to find
- Support consistent workflows
- Give managers useful summaries

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- The same data is entered more than once
- Reports take long to prepare
- Teams use separate versions of records

8. QUESTIONS TO ASK THE CLIENT

- Which process causes the most difficulty?
- What records do you keep today?
- Who creates, checks and approves records?
- Which reports are needed and how often?
- How many users, locations or branches?
- Which current tools must connect to it?

9. HOW TO EXPLAIN IT TO A CLIENT

We first map the way your team works, then assess whether one system could organize the records and steps that matter most.

10. WHAT NOT TO PROMISE

- Do not promise every workflow or integration is included.
- Technical staff must confirm scope, migration, permissions, cost and delivery time.

1. WHAT IS IT?

A school management system organizes selected student, staff, academic and administrative records.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Student details, attendance, fees, examination records and parent communication may be spread across registers.

3. WHO MAY NEED IT?

Schools, colleges, training centers and education organizations.

4. TANZANIA EXAMPLE

A fictional Arusha school wants staff to find student attendance and fee status without checking several books.

5. WHAT JAYTRIX CAN PROVIDE

- Student and class records
- Attendance and examination workflows
- Fee records and reports
- Staff roles and parent communication options

6. BUSINESS BENEFITS

- Make records easier to review
- Reduce repeated administrative entry
- Support clearer reporting
- Improve access to agreed information

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Staff keep separate registers for the same students
- Fee summaries take time to prepare
- Parents wait for routine updates

8. QUESTIONS TO ASK THE CLIENT

- How many students, classes and campuses?
- How do you record attendance today?
- How are fees, balances and receipts handled?
- What examination reports are required?
- Who may view or change each record?
- How do parents currently receive updates?

9. HOW TO EXPLAIN IT TO A CLIENT

We can discuss a school system that organizes the records and daily administrative steps your staff need to manage.

10. WHAT NOT TO PROMISE

- Do not promise compliance with a specific education authority or instant data migration.
- Confirm school rules, user access, privacy and reporting needs with the technical team.

1. WHAT IS IT?

POS means point of sale: the place and process where a customer order and payment are recorded.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Paper tickets and manual totals can make it harder to track orders, payments, staff activity and stock.

3. WHO MAY NEED IT?

Restaurants, cafes, bars, hotels and food outlets.

4. TANZANIA EXAMPLE

A fictional Mwanza cafe wants counter staff and kitchen staff to follow the same recorded order.

5. WHAT JAYTRIX CAN PROVIDE

- Menu and order entry
- Table or counter workflow
- Receipts and payment records
- Sales reports and stock options

6. BUSINESS BENEFITS

- Organize order details
- Reduce repeated handwritten totals
- Review sales activity more easily
- Connect agreed sales and stock records

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Orders are repeated or misplaced
- End-of-day totals take long
- Managers cannot easily compare sales by item

8. QUESTIONS TO ASK THE CLIENT

- Do customers order at a table or counter?
- How do orders reach the kitchen?
- Which payment types do you record?
- Do you need receipts or table management?
- Should menu sales update stock?
- What reports does the owner review?

9. HOW TO EXPLAIN IT TO A CLIENT

We can map your order and payment process and see whether a POS workflow would help staff record and follow sales more clearly.

10. WHAT NOT TO PROMISE

- Do not promise offline operation, printer support or payment integration without confirmation.
- Confirm devices, connectivity, receipt format and stock rules with technical staff.

1. WHAT IS IT?

Inventory software records products, stock received, stock sold and other stock movements.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

A business may not know what is available, what was sold or when a product needs attention.

3. WHO MAY NEED IT?

Retail shops, pharmacies, wholesalers, hardware stores and distributors.

4. TANZANIA EXAMPLE

A fictional Dodoma shop records purchases and sales to review which products need reordering.

5. WHAT JAYTRIX CAN PROVIDE

- Product and unit records
- Purchases, sales and stock movements
- Low-stock notices if scoped
- Stock and sales reports

6. BUSINESS BENEFITS

- Improve stock visibility
- Find product records more easily
- Review movement and sales
- Support more timely reordering decisions

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Stock counts often differ from records
- Staff discover shortages late
- Sales and purchases are recorded separately

8. QUESTIONS TO ASK THE CLIENT

- How many products and units do you manage?
- How do you receive and count stock?
- How do you record returns or damaged items?
- Do you sell from more than one location?
- Who may adjust stock records?
- Which stock or sales reports are important?

9. HOW TO EXPLAIN IT TO A CLIENT

We can look at how products move through your business and discuss a system for recording stock, purchases and sales together.

10. WHAT NOT TO PROMISE

- Do not guarantee exact stock accuracy without agreed procedures and data setup.
- Confirm units, returns, opening balances, branches and user permissions.

1. WHAT IS IT?

A booking system lets a client request or choose an available service time and records the appointment.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Bookings in calls, notebooks and messages can overlap, be forgotten or lack important details.

3. WHO MAY NEED IT?

Salons, clinics, hotels, consultants, training centers and service businesses.

4. TANZANIA EXAMPLE

A fictional Mwanza salon records staff availability and appointments in one calendar for review.

5. WHAT JAYTRIX CAN PROVIDE

- Services, staff and available times
- Booking requests and confirmation steps
- Reminder options if agreed
- Appointment and customer records

6. BUSINESS BENEFITS

- Organize appointments
- Reduce scheduling confusion
- Make booking details easier to find
- Support timely client communication

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Appointments are duplicated
- Staff spend time checking availability
- Clients often ask for confirmation

8. QUESTIONS TO ASK THE CLIENT

- Which services and appointment lengths?
- How many staff or rooms are bookable?
- Can clients choose a time or request approval?
- How should changes and cancellations work?
- Should the system send reminders?
- Who manages availability and client records?

9. HOW TO EXPLAIN IT TO A CLIENT

We can map how clients book and how your team confirms availability, then plan a booking flow around those steps.

10. WHAT NOT TO PROMISE

- Do not promise a fully automated schedule or reminder delivery without checking requirements.
- Confirm calendar rules, approval steps and external messaging costs.

1. WHAT IS IT?

A mobile application is software used on a phone or tablet by customers or staff.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

People may need a convenient way to place requests, receive updates or complete work while away from a desk.

3. WHO MAY NEED IT?

Delivery services, marketplaces, booking businesses, field teams and organizations with mobile users.

4. TANZANIA EXAMPLE

A fictional Morogoro service team wants field staff to submit visit updates from phones.

5. WHAT JAYTRIX CAN PROVIDE

- User journeys and screens
- Customer or staff workflows
- Connection to agreed business records
- Android or iOS planning as scoped

6. BUSINESS BENEFITS

- Make selected tasks easier on a phone
- Support timely field updates
- Give customers another service channel
- Organize mobile requests

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Customers repeat the same request by phone
- Field staff send updates manually
- A website does not support a key mobile task

8. QUESTIONS TO ASK THE CLIENT

- Who will use the app and for what task?
- Which phones or operating systems matter?
- What should users submit or view?
- Does it need to work without internet?
- What information should it share with other systems?
- Who will support and update it?

9. HOW TO EXPLAIN IT TO A CLIENT

We can explore whether a phone app is the right way for your customers or staff to complete the task you described.

10. WHAT NOT TO PROMISE

- Do not promise app-store approval, device compatibility or offline operation.
- Confirm platforms, integrations, security and ongoing support needs.

1. WHAT IS IT?

A desktop application is software installed or used on a computer, often at a fixed work location.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Some counter, office or workshop tasks need a focused computer workflow or have particular operating conditions.

3. WHO MAY NEED IT?

Retail counters, offices, workshops and teams with specialized or connectivity-sensitive tasks.

4. TANZANIA EXAMPLE

A fictional workshop wants a computer-based screen to record incoming equipment and service status.

5. WHAT JAYTRIX CAN PROVIDE

- Task-specific computer screens
- Records and reports for staff
- Device and printer requirements review
- Offline needs assessment if requested

6. BUSINESS BENEFITS

- Support focused counter work
- Keep work steps consistent
- Make selected records easier to retrieve
- Fit a specialized computer workflow

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Staff use one shared computer for a repeated process
- General tools do not fit the workstation task
- Connectivity limits interrupt daily work

8. QUESTIONS TO ASK THE CLIENT

- Which computers and operating systems are used?
- What task must the software support?
- How many staff will use each workstation?
- Which printers, scanners or devices are involved?
- What happens when internet is unavailable?
- How are records backed up and updated?

9. HOW TO EXPLAIN IT TO A CLIENT

We can review the computer-based work and decide whether a desktop application is more suitable than a website or mobile tool.

10. WHAT NOT TO PROMISE

- Do not promise offline use, device compatibility or data recovery.
- Confirm supported computers, deployment, backup and network conditions.

1. WHAT IS IT?

The backend handles business rules and records behind the screens. An API is a defined way for software to exchange information.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

An app may need a reliable place to save records or exchange information with another service.

3. WHO MAY NEED IT?

Businesses with mobile apps, customer portals, payment needs or several software tools.

4. TANZANIA EXAMPLE

A fictional retailer wants its customer app to send orders to the business record system.

5. WHAT JAYTRIX CAN PROVIDE

- Business rules and data handling
- API connections for agreed tools
- Access and validation planning
- Integration support subject to scope

6. BUSINESS BENEFITS

- Allow software parts to exchange agreed data
- Support mobile and web services
- Reduce manual information transfer
- Keep business rules in one service

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- An app must share records with a website
- Staff copy data between platforms
- A payment or messaging service must connect

8. QUESTIONS TO ASK THE CLIENT

- Which systems need to exchange information?
- What data should move and when?
- Who owns each system and account?
- Are payment, SMS or email services involved?
- What access and security rules apply?
- Who can approve access and testing?

9. HOW TO EXPLAIN IT TO A CLIENT

We can review what information needs to move between your app and other systems, then ask our technical team to assess the connection.

10. WHAT NOT TO PROMISE

- Do not promise that an outside service exposes a usable API or will approve access.
- Technical staff must confirm documentation, credentials, security, costs and feasibility.

1. WHAT IS IT?

Integration connects two or more systems so agreed information can move between them.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Teams may enter the same details repeatedly or work from different versions of the same record.

3. WHO MAY NEED IT?

Businesses using a POS, inventory tool, website, payment provider, SMS or email system.

4. TANZANIA EXAMPLE

A fictional retailer wants accepted online orders to appear in the sales workflow staff already use.

5. WHAT JAYTRIX CAN PROVIDE

- Review of systems and data flows
- Connection plan and access needs
- Testing of agreed exchanges
- Error and support approach if scoped

6. BUSINESS BENEFITS

- Reduce repeat entry
- Make selected records more consistent
- Connect customer and staff workflows
- Improve visibility across tools

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Staff copy the same order into two systems
- Payments are checked manually against sales
- Customer updates are sent one by one

8. QUESTIONS TO ASK THE CLIENT

- Which systems are involved?
- What information should pass between them?
- Which system is the main record?
- How often should data be exchanged?
- Who provides access and approves testing?
- What should happen if a connection fails?

9. HOW TO EXPLAIN IT TO A CLIENT

We can map where information is being copied today and explore whether the systems can share the required records safely.

10. WHAT NOT TO PROMISE

- Do not guarantee compatibility with third-party platforms.
- Confirm access, vendor limits, data ownership, failure handling and integration costs.

1. WHAT IS IT?

Hosting stores a website on an internet-connected server. Maintenance covers agreed updates, backups and checks.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

A site may be unavailable, outdated or hard to recover if no one manages its hosting and upkeep.

3. WHO MAY NEED IT?

Website owners, online shops, schools, NGOs and companies without an in-house web team.

4. TANZANIA EXAMPLE

A fictional Dar company wants a contact person for updates and a routine to check backups.

5. WHAT JAYTRIX CAN PROVIDE

- Domain and hosting guidance
- Website deployment and SSL setup
- Backups and update planning
- Monitoring and maintenance options

6. BUSINESS BENEFITS

- Keep an online site available
- Reduce uncertainty about updates
- Improve recovery preparation
- Give the client a support route

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- No one knows who controls the domain
- Updates are postponed
- Backups or renewal dates are unclear

8. QUESTIONS TO ASK THE CLIENT

- Who owns the domain and hosting account?
- Where is the site hosted today?
- How often does content change?
- What backup and recovery needs exist?
- Who should receive outage notices?
- What support hours and response expectations are needed?

9. HOW TO EXPLAIN IT TO A CLIENT

We can review who manages your domain, hosting, updates and backups, then agree what ongoing support would be useful.

10. WHAT NOT TO PROMISE

- Do not promise uninterrupted availability, instant recovery or unlimited support.
- Confirm provider terms, access, backups, renewal costs and response scope.

1. WHAT IS IT?

IT consultancy helps a business understand its needs and make informed technology choices.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

A client may know work is difficult but not know whether they need a website, software, integration or process change.

3. WHO MAY NEED IT?

SMEs, schools, NGOs and organizations planning technology changes or reviewing existing tools.

4. TANZANIA EXAMPLE

A fictional training center asks for advice because enrollment and attendance records take time to compile.

5. WHAT JAYTRIX CAN PROVIDE

- Discovery and workflow review
- Options and requirements summary
- Technology and infrastructure guidance
- Next-step recommendations

6. BUSINESS BENEFITS

- Clarify the real business need
- Compare options before committing
- Identify questions and constraints
- Plan a practical next step

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- A client requests “an app” without clear needs
- Different teams describe the problem differently
- Past tools did not fit their process

8. QUESTIONS TO ASK THE CLIENT

- What outcome are you trying to improve?
- How is the work handled now?
- What has already been tried?
- Who will use or approve a change?
- What constraints or dates matter?
- What would make a recommendation useful?

9. HOW TO EXPLAIN IT TO A CLIENT

We can start by understanding your process and goals, then help identify options before deciding what technology to build or buy.

10. WHAT NOT TO PROMISE

- Do not present an early discussion as a completed audit or formal certification.
- Confirm the advisory scope, information needed, deliverables and fees.

1. WHAT IS IT?

Cybersecurity is the work of protecting business systems and information from unauthorized access, loss or misuse.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Weak access, missing backups or poor updates can expose information and interrupt business operations.

3. WHO MAY NEED IT?

Businesses and organizations that store customer, employee, financial or operational information.

4. TANZANIA EXAMPLE

A fictional clinic reviews staff access and backup routines for its appointment records.

5. WHAT JAYTRIX CAN PROVIDE

- Access and permission review
- Backup and update guidance
- Secure configuration review
- Defensive assessment and recommendations

6. BUSINESS BENEFITS

- Make access responsibilities clearer
- Improve preparation for data loss
- Identify security weaknesses to address
- Protect business continuity

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- Staff share one password
- Departed staff still have access
- No one has checked backups recently

8. QUESTIONS TO ASK THE CLIENT

- What information would be most sensitive?
- Who can access it today?
- How are staff accounts created and removed?
- When were backups last restored and checked?
- Who handles updates and security alerts?
- Has the organization approved a security review?

9. HOW TO EXPLAIN IT TO A CLIENT

We can discuss a defensive review of access, backups and system settings, then provide practical improvements for the team to consider.

10. WHAT NOT TO PROMISE

- Do not claim a system is completely secure or promise prevention of every incident.
- Get written authorization and agree a safe, defensive assessment scope first.

1. WHAT IS IT?

Automation uses software to complete agreed repeated steps with less manual handling.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

Staff may copy information, send routine updates or prepare the same report by hand each time.

3. WHO MAY NEED IT?

Offices, schools, sales teams, service businesses and organizations with repeated information tasks.

4. TANZANIA EXAMPLE

A fictional course center collects enrollment details in a form and wants them stored for staff review.

5. WHAT JAYTRIX CAN PROVIDE

- Workflow review and task mapping
- Forms and record handling
- Notifications or approval steps
- Reports for agreed information

6. BUSINESS BENEFITS

- Reduce repetitive entry
- Make handoffs clearer
- Support more consistent records
- Free time for other work

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- The same details are typed into multiple files
- Routine reminders are sent manually
- Simple reports are assembled repeatedly

8. QUESTIONS TO ASK THE CLIENT

- Which task happens repeatedly?
- What starts the process?
- Who checks or approves each step?
- Which records should be created?
- What exceptions need human review?
- How will staff know a task is complete?

9. HOW TO EXPLAIN IT TO A CLIENT

We can map one repeated task and explore which steps software could handle while keeping the right checks with your staff.

10. WHAT NOT TO PROMISE

- Do not promise that automation removes all human review or errors.
- Confirm exceptions, approvals, data quality and third-party services.

1. WHAT IS IT?

A custom solution is planned for a business workflow that standard products do not support well enough.

2. WHAT BUSINESS PROBLEM DOES IT SOLVE?

A standard tool may not fit the client's roles, rules or steps, leading to manual workarounds.

3. WHO MAY NEED IT?

Organizations with a distinct process, connected services or requirements that existing tools do not meet.

4. TANZANIA EXAMPLE

A fictional cooperative asks to organize member requests and collection records across its locations.

5. WHAT JAYTRIX CAN PROVIDE

- Discovery and requirements definition
- Options and scope planning
- Custom software or integration if approved
- Implementation and support planning

6. BUSINESS BENEFITS

- Address a specific agreed workflow
- Organize roles and records
- Reduce unsuitable workarounds
- Plan for future changes

7. HOW TO IDENTIFY A POTENTIAL CLIENT

- The same workaround appears every week
- A standard tool misses an essential approval step
- Different locations follow different records

8. QUESTIONS TO ASK THE CLIENT

- Which part of the current process does not fit?
- What rules must the solution follow?
- Who uses and approves each step?
- Which current tools or records are involved?
- What must be ready first?
- How will the client judge whether it fits?

9. HOW TO EXPLAIN IT TO A CLIENT

We can understand the workflow first, then determine whether a scoped custom solution is a sensible option.

10. WHAT NOT TO PROMISE

- Do not promise feasibility, a fixed price or delivery date before requirements review.
- Technical staff must confirm architecture, security, dependencies, scope and support.

DISCOVERY & QUALIFICATION

Ask what process is difficult, how records are managed, what takes staff time, how orders arrive and what information is hard to find.

Qualify need, decision maker, budget approach, timeline, current process, urgency, scope and ability to proceed.

Checklist: ☐ Need ☐ Stakeholder ☐ Process ☐ Timing ☐ Next action. Mark unknowns honestly.

DISCOVERY | LISTEN FOR THE WHOLE PROCESS

Ask first. Understand the current work before recommending technology.

QUALIFY WHAT YOU KNOW

☐ Business need

☐ Decision maker

☐ Current process

☐ Budget approach

☐ Timeline and urgency

☐ Scope and next action

Record unknowns honestly. Never guess to make a lead look qualified.

A useful discovery conversation ends with a clear next step.

CLIENT ACQUISITION CHANNELS

How to use each route, who to reach and how to start a respectful conversation.

PERSONALIZE THE MESSAGE. ASK, LISTEN AND RESPECT THE PROSPECT'S TIME.

NETWORKING

USE Attend business events; ask about real workflows.
TARGET Owners, managers and professional groups.
OPEN "What process in your business would you most like to make easier?"

REFERRALS

USE Ask a trusted contact for a relevant introduction.
TARGET Businesses with an existing relationship to your network.
OPEN "May I mention that you suggested we speak about their records?"

WHATSAPP

USE Send a short, personal message at a suitable time.
TARGET Businesses that publish a business contact number.
OPEN "Hello, I noticed [specific detail]. How do you handle [process] today?"

SOCIAL MEDIA

USE Comment helpfully, then ask permission to continue privately.
TARGET Active local shops, hotels, restaurants and service firms.
OPEN "Your [service/product] post caught my attention. May I ask how you manage enquiries?"

LINKEDIN

USE Read the person's role and company page before writing.
TARGET Decision makers and professional organizations.
OPEN "I work with JAYTRIX SYSTEMS. I would value learning how your team handles [process]."

DIRECT OUTREACH

USE Research one business and name a relevant observation.
TARGET Organizations with a visible workflow or information gap.
OPEN "I saw [specific public detail]. Is improving [process] a current priority?"

BUSINESS VISITS

USE Request a convenient meeting; do not interrupt service.
TARGET Nearby shops, schools, clinics, hotels and offices.
OPEN "Who is the best person to speak with about your business systems?"

PARTNERSHIPS

USE Build mutual referrals with complementary providers.
TARGET Accountants, consultants, agencies and IT providers.
OPEN "Would it be useful to refer suitable clients to each other?"

EXISTING CONTACTS

USE Reconnect respectfully and ask for advice first.
TARGET Former colleagues, classmates and business contacts.
OPEN "I'm growing JAYTRIX SYSTEMS. What technology challenges do you see locally?"

DIGITAL MARKETING

USE Share useful examples and invite a low-pressure enquiry.
TARGET Businesses already engaging with online content.
OPEN "If [business process] is difficult, message us to discuss possible options."

GOOD PRACTICE

Use public business contact details appropriately. Stop if the person declines further contact.

PROCESS MAP

Lead > contact > discover > qualify > solution > proposal > agreement > payment > delivery > support. Escalate integrations, security, complex requirements, hosting, migration, devices and timelines. Technical colleagues confirm scope, feasibility, cost and timing. Never promise what is unconfirmed.

CLEAR HANDOVER | BUSINESS DEVELOPMENT + TECHNICAL TEAM

The representative finds the opportunity; the technical team confirms what can be delivered.

BUSINESS DEVELOPMENT REPRESENTATIVE

HAND OVER THE CLIENT BRIEF

Process, needs, constraints, unanswered questions and decision timing.

TECHNICAL TEAM

Do not promise features, price or timing until they are confirmed.

FICTIONAL TRAINING EXAMPLE | NOT A JAYTRIX CLIENT CLAIM

DAR ES SALAAM

BUSINESS SITUATION & PROBLEM

A fictional café uses handwritten order tickets during busy periods. Staff pass orders to the kitchen and the manager totals sales from separate records.

FROM BUSINESS NEED TO POSSIBLE VALUE

CURRENT CHALLENGE

A fictional café uses handwritten order tickets during busy periods

POSSIBLE SERVICE

Explore a restaurant POS workflow for orders and recorded sales. Inventory features depend on confirmed scope.

VALUE TO EXPLORE

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- Where do orders start, and how do they reach the kitchen?
- Do customers order at tables, a counter, or both?
- How are payments, cancelled orders and stock recorded?

POSSIBLE SOLUTION & APPROACH

Explore a restaurant POS workflow for orders and recorded sales. Inventory features depend on confirmed scope.

POTENTIAL BENEFITS

- Give staff a shared view of recorded orders.
- Help the manager review sales records and agreed reports.

SAMPLE OPENING

"How do counter and table orders reach your kitchen, and how do you review the day's sales?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Order flow: counter, table, kitchen

- Devices, printers and connectivity

- Users, branches and approval roles

- Payments, stock rules and reports requested

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

**BUSINESS SITUATION & PROBLEM**

A fictional school keeps attendance, fee and examination details in separate registers. Preparing summaries takes staff time and records can be difficult to locate.

FROM BUSINESS NEED TO POSSIBLE VALUE**CURRENT CHALLENGE**

A fictional school keeps attendance, fee and examination details in separate registers

**POSSIBLE SERVICE**

Explore a school management system covering only the records and workflows the school approves.

**VALUE TO EXPLORE**

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- How many students, classes and campuses are involved?
- How are fees, balances and receipts recorded?
- Who may view or update student and examination records?

POSSIBLE SOLUTION & APPROACH

Explore a school management system covering only the records and workflows the school approves.

POTENTIAL BENEFITS

- Make agreed records easier for authorized staff to find.
- Support more consistent summaries and reporting.

SAMPLE OPENING

"Which school records take your team the most time to find or summarize?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Classes, student volumes and campuses
- Fee, attendance and examination rules
- User roles, privacy and parent communication
- Existing records and any migration needs

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

BUSINESS SITUATION & PROBLEM

A fictional salon receives appointments through calls and WhatsApp. Staff sometimes need to check availability several times, and two requests may overlap.

FROM BUSINESS NEED TO POSSIBLE VALUE

CURRENT CHALLENGE

A fictional salon receives appointments through calls and WhatsApp

POSSIBLE SERVICE

Explore a booking and appointment workflow with the salon's confirmation rules.

VALUE TO EXPLORE

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- Which services and appointment lengths do you offer?
- How many staff members or chairs can be booked?
- How do you handle changes, cancellations and reminders?

POSSIBLE SOLUTION & APPROACH

Explore a booking and appointment workflow with the salon's confirmation rules.

POTENTIAL BENEFITS

- Give staff one place to review appointments.
- Make availability and booking follow-up easier to coordinate.

SAMPLE OPENING

"How do you check availability when several clients ask for the same time?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Services, duration and working hours

- Staff, chairs and booking permissions

- Confirmation, deposits and cancellation rules

- Reminder channels and customer information

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

BUSINESS SITUATION & PROBLEM

A fictional shop records stock in notebooks and sales separately. The owner notices differences during stock counts and is not always sure when to reorder.

FROM BUSINESS NEED TO POSSIBLE VALUE

CURRENT CHALLENGE

A fictional shop records stock in notebooks and sales separately

POSSIBLE SERVICE

Explore an inventory and sales system based on the shop's product and stock movement rules.

VALUE TO EXPLORE

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- How are products received, counted and sold?
- How do you record returns, damaged goods and stock adjustments?
- Do you have branches, product variations or different user roles?

POSSIBLE SOLUTION & APPROACH

Explore an inventory and sales system based on the shop's product and stock movement rules.

POTENTIAL BENEFITS

- Make agreed stock and sales records easier to review.
- Support more informed reordering discussions.

SAMPLE OPENING

"When stock counts do not match the records, how do you find where the difference happened?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Product list, units and opening balances

- Purchases, sales, returns and adjustments

- Branches, users and approval permissions

- Reports, devices and any data import

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

**BUSINESS SITUATION & PROBLEM**

A fictional guesthouse answers repeated questions about room types, location, facilities and booking enquiries through separate WhatsApp conversations.

FROM BUSINESS NEED TO POSSIBLE VALUE**CURRENT CHALLENGE**

A fictional guesthouse answers repeated questions about room types, location, facilities and booking enquiries through separate WhatsApp conversations

**POSSIBLE SERVICE**

Explore a business website; discuss a booking workflow separately if the hotel needs one.

**VALUE TO EXPLORE**

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- Which room types, rates and facilities should guests see?
- How do guests enquire or request a reservation today?
- Who approves content, languages, photos and price updates?

POSSIBLE SOLUTION & APPROACH

Explore a business website; discuss a booking workflow separately if the hotel needs one.

POTENTIAL BENEFITS

- Keep approved guest information together online.
- Give visitors a clear route to ask questions or contact the hotel.

SAMPLE OPENING

"Which questions do guests ask most before choosing a room or contacting you?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Approved text, room details and photographs

- Languages, location/map and contact channels

- Reservation process and third-party connections

- Domain/hosting ownership and update responsibility

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

FICTIONAL TRAINING EXAMPLE | NOT A JAYTRIX CLIENT CLAIM

DAR ES SALAAM

BUSINESS SITUATION & PROBLEM

A fictional property office manages listings and buyer enquiries across staff chats and spreadsheets. It can be difficult to see who will follow up or whether a viewing was arranged.

FROM BUSINESS NEED TO POSSIBLE VALUE

CURRENT CHALLENGE

A fictional property office manages listings and buyer enquiries across staff chats and spreadsheets

POSSIBLE SERVICE

Explore a property listing website or a lead-management workflow, depending on the main need.

VALUE TO EXPLORE

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- What property details must staff record for each listing?
- How are buyer enquiries assigned to agents?
- How are viewings, follow-ups and listing changes tracked?

POSSIBLE SOLUTION & APPROACH

Explore a property listing website or a lead-management workflow, depending on the main need.

POTENTIAL BENEFITS

- Make listing status and agreed follow-up steps easier to review.
- Give the team a clearer view of buyer enquiries and viewings.

SAMPLE OPENING

"How does your team know which agent owns the next step for each buyer enquiry?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Listing fields, photos and publishing approvals

- Agent roles and enquiry assignment rules

- Viewing and follow-up workflow

- Privacy, existing records and integrations

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

FICTIONAL TRAINING EXAMPLE | NOT A JAYTRIX CLIENT CLAIM

TANZANIA

BUSINESS SITUATION & PROBLEM

A fictional accounting firm receives client documents through email and messaging. Staff manually sort requests and clients contact the office to ask for progress.

FROM BUSINESS NEED TO POSSIBLE VALUE

CURRENT CHALLENGE

A fictional accounting firm receives client documents through email and messaging

POSSIBLE SERVICE

Explore a client request portal or a controlled workflow/automation after requirements review.

VALUE TO EXPLORE

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- How do clients submit documents and service requests?
- Who reviews, assigns and approves each request?
- Which client information needs restricted access or secure storage?

POSSIBLE SOLUTION & APPROACH

Explore a client request portal or a controlled workflow/automation after requirements review.

POTENTIAL BENEFITS

- Give staff a clearer view of request status and ownership.
- Organize client hand-offs and agreed updates.

SAMPLE OPENING

"How do clients currently submit information, and how can they check the request's progress?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Request types, steps and approval points

- User access, file types and privacy needs

- Client updates and response workflow

- Existing tools, backup expectations and scope

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

**BUSINESS SITUATION & PROBLEM**

A fictional NGO gathers field updates on paper and combines them in spreadsheets. Connectivity varies by location, and managers need agreed summaries for review.

FROM BUSINESS NEED TO POSSIBLE VALUE**CURRENT CHALLENGE**

A fictional NGO gathers field updates on paper and combines them in spreadsheets

**POSSIBLE SERVICE**

Explore a mobile data-collection or workflow solution only after offline, privacy and reporting needs are assessed.

**VALUE TO EXPLORE**

Discuss what better records, clearer steps or easier communication would mean for this client.

DISCOVERY QUESTIONS

- What information do field staff collect and how often?
- Where is internet access unreliable, and what must happen offline?
- Who checks submissions and which reports are required?

POSSIBLE SOLUTION & APPROACH

Explore a mobile data-collection or workflow solution only after offline, privacy and reporting needs are assessed.

POTENTIAL BENEFITS

- Organize field submissions and review steps.
- Make approved program information easier to summarize.

SAMPLE OPENING

"Which part of collecting and reviewing field reports creates the most delay today?"

HAND OVER THESE FACTS TO THE TECHNICAL TEAM

Ask permission to share the client brief. Label unknown details as unknown.

- Forms, indicators and reporting formats

- Locations, users and access levels

- Connectivity, offline and sync requirements

- Approvals, sensitive data and retention needs

REMEMBER

This is a discussion example. Confirm the client's real workflow; the technical team validates feasibility, scope, security, cost and timing.

STATUS: Design-complete platform specification; private repo.

IN BUSINESS TERMS

A planned sales and stock platform for shops, hotels, bars, pharmacies, hardware businesses and wholesalers. It is designed to bring branch sales and inventory records into one business workflow while keeping each business's records separate.

TECH WORDS, SIMPLY EXPLAINED

POS means the checkout tool used to record a sale. Multi-tenant means different businesses can use the platform while their records stay separated. Offline-sync planning concerns what happens when internet access is interrupted; confirm what is implemented before discussing it as an available feature.

The technical names in the description are the tools used to plan or build the system; they are not promises about launch or integrations.

PROJECT WORKFLOW DOCUMENTED SCOPE

reports

Illustrative workflow only. Confirm the client needs and agreed scope.

STATUS: Private build.

IN BUSINESS TERMS

A private national church administration platform for organizing governance work, records and user access across Tanzania Mainland and Zanzibar.

TECH WORDS, SIMPLY EXPLAINED

User permissions define who may view or change particular information. A database is the organized store where records are kept. Laravel, MySQL and the other named technologies are behind-the-scenes tools used to build the platform.

Describe only the documented scope. Do not share private project information or imply public availability.

PROJECT WORKFLOW DOCUMENTED SCOPE

ILLUSTRATIVE BUSINESS USE

A client-facing view of the documented system scope

CLIENT NEED > SYSTEM TASK > BUSINESS USE

Illustrative workflow only. Confirm the client needs and agreed scope.

STATUS: Source available.

IN BUSINESS TERMS

A source-available pharmacy tool for recording inventory activity, sales and related business records. A representative can ask how stock is received, sold, returned and reviewed.

TECH WORDS, SIMPLY EXPLAINED

A database is an organized record store. Node.js and Express are behind-the-scenes tools used to run the application. These names do not mean the system has regulatory approval.

Do not claim pharmacy-regulatory approval or guaranteed stock accuracy.

PROJECT WORKFLOW DOCUMENTED SCOPE

ILLUSTRATIVE BUSINESS USE

A client-facing view of the documented system scope

CLIENT NEED > SYSTEM TASK > BUSINESS USE

Illustrative workflow only. Confirm the client needs and agreed scope.

STATUS: Source available.

IN BUSINESS TERMS

A source-available payroll application for calculating salaries and deductions and checking information as payroll entries are processed.

TECH WORDS, SIMPLY EXPLAINED

Validation means checking entered information before it is processed. Laravel is a behind-the-scenes software tool used to build the application. The client must confirm its own payroll rules and review results.

Do not promise legal compliance or error-free payroll.

PROJECT WORKFLOW DOCUMENTED SCOPE

deductions

Illustrative workflow only. Confirm the client needs and agreed scope.

STATUS: Private build.

IN BUSINESS TERMS

A private online marketplace workflow for shoppers, independent sellers, riders and administrators. It covers product listings, orders and delivery coordination.

TECH WORDS, SIMPLY EXPLAINED

Multi-vendor means several sellers use one marketplace. An admin manages the service. JWT access is a behind-the-scenes way of checking a user's sign-in. React and Node.js are software-building tools; MariaDB stores organized records; Cloudinary stores images.

Do not promise that third-party services are integrated, or that the platform is publicly launched or proven at a particular scale.

PROJECT WORKFLOW DOCUMENTED SCOPE

RESPONDING TO CLIENT OBJECTIONS

Listen for the concern behind the words. Respond calmly and agree a next step.

"We don't need a website."

MAY MEAN

May rely on referrals or social media.

POSSIBLE RESPONSE

"That may work today. How do new customers find accurate details about you?"

INVOLVE / ACTION: Escalate if they ask for a specific scope or price.

"It is too expensive."

MAY MEAN

Value, budget or scope may be unclear.

POSSIBLE RESPONSE

"I understand. Which business need matters most? We can ask the team about suitable

INVOLVE / ACTION: Never discount or quote a new price yourself.

"We already use Excel."

MAY MEAN

Their current tool may work, with gaps.

POSSIBLE RESPONSE

"That is useful to know. What becomes difficult as records or users increase?"

INVOLVE / ACTION: Ask the technical team before claiming migration or automation

"We are a small business."

MAY MEAN

They may fear complexity or cost.

POSSIBLE RESPONSE

"A solution should fit your current needs. What task takes the most time?"

INVOLVE / ACTION: Do not promise a small or fixed price without review.

"We need to think about it."

MAY MEAN

They may need time, approval or clearer value.

POSSIBLE RESPONSE

"Of course. What information would help you decide?"

INVOLVE / ACTION: Agree a respectful follow-up date.

"Can you reduce the price?"

MAY MEAN

They may have a budget limit or compare offers.

POSSIBLE RESPONSE

"I can record your budget and priorities for the team to review."

INVOLVE / ACTION: Do not approve discounts or change payment terms.

"How long will it take?"

MAY MEAN

They need to plan operations or launch.

POSSIBLE RESPONSE

"Timing depends on the agreed requirements. I will ask the team to assess it."

INVOLVE / ACTION: Only technical team confirms delivery dates.

"Can you build this feature?"

MAY MEAN

They are checking fit or feasibility.

POSSIBLE RESPONSE

"Let me capture how you need it to work and confirm with our technical team."

INVOLVE / ACTION: Never promise feasibility, integrations, security or results.

Good sales conversations protect trust:

acknowledge the concern, ask one useful question, record it and agree a next step.

DAILY ROUTINE & LEAD TRACKING

Use a consistent routine and record the next action for every active opportunity.

DAILY WORKFLOW

- Research relevant businesses
- Contact prospects personally
- Listen, ask and record needs
- Follow up when agreed
- Schedule meetings or handovers

WEEKLY REVIEW | SUGGESTED METRICS

- Prospects contacted / conversations started
 - Qualified leads / meetings held
 - Presentations / proposals shared
 - Projects closed / follow-ups pending
- Track activity; targets should be agreed by the company.

LEAD TRACKER | COMPLETE AFTER EACH USEFUL CONVERSATION

POTENTIAL SOLUTION

Possible JAYTRIX service; confirm later

OWNER

Person responsible for next action

CLIENT PRIVACY

Collect only useful details, store them securely and share them only with authorized colleagues.

PROFESSIONAL STANDARDS & ROLE

Represent JAYTRIX accurately, protect client trust and bring technical questions to the right team.

PROFESSIONAL RULES

- Protect client information and respect confidentiality.
- Describe JAYTRIX capabilities honestly; distinguish examples from delivered client work.
- Do not promise features, security, results, price or timing without confirmation.
- Do not offer discounts or change commercial terms without approval.
- Keep messages respectful, clear and professional.
- Record important conversations, decisions and next steps.
- Follow up consistently without pressuring the client.
- Escalate technical, infrastructure and security questions to the technical team.
- Never guarantee business results that cannot be guaranteed.

YOU ARE RESPONSIBLE FOR

- Finding relevant prospects
- Building professional relationships
- Identifying and recording business needs
- Explaining relevant services and value
- Qualifying opportunities and following up
- Coordinating with the technical team

YOU ARE NOT RESPONSIBLE FOR

- Programming or implementation
- Choosing system architecture
- Confirming technical scope or feasibility
- Making technical or security guarantees
- Approving unconfirmed prices or timelines
- Authorizing discounts or contract terms

THE HANDOVER RULE

You communicate the client's business need and keep the opportunity moving.

The technical team confirms feasibility, scope, implementation and technical requirements.

SERVICE → TYPICAL CLIENT

SERVICE	POSSIBLE CLIENT	COMMON SIGNAL
Business website	Schools, hotels, NGOs, professional firms	No clear online information
E-commerce website	Retailers, fashion and electronics sellers	Online orders handled manually
Business management system	SMEs with several workflows	Records split across notebooks and files
School management system	Schools, colleges, training centres	Student, fee or attendance tracking
Restaurant / POS system	Restaurants, cafes, hotels and bars	Orders and sales hard to reconcile
Inventory and sales system	Shops, pharmacies and wholesalers	Unclear stock and sales records
Booking and appointment system	Salons, clinics, hotels, consultants	Appointments overlap or are missed
Mobile / desktop application	Service firms or internal teams	Staff or customers need a dedicated tool
Backend, API or integration	Businesses connecting software services	Systems or payments do not communicate
Hosting and maintenance	Organizations with websites	Updates, backups or uptime need attention
IT consultancy	Organizations unsure what to adopt	Need assessment or technology plan
Cybersecurity solutions	Organizations handling important data	Access, backups or security need review
Automation / custom solution	Teams repeating manual tasks	Repeated entry, delays or disconnected steps

PROBLEM → POSSIBLE SOLUTION

No online presence → Business website	Manual appointments → Booking system
Manual online selling → E-commerce website	Separate systems → System integration
Manual school records → School management system	Repeated tasks → Business process automation
Poor stock visibility → Inventory system	Unmaintained website → Hosting and maintenance
Unmatched restaurant orders → Restaurant / POS system	

PROJECT EXAMPLES

Use these documented JAYTRIX examples to make a service conversation more concrete. Explain each project's current status accurately.

01 SALES & INVENTORY

JAYTRIX Sales Management System

Multi-tenant POS and inventory platform covering sales, branches, stock and planned offline workflows.

DESIGN-COMPLETE · PRIVATE BUILD

02 GOVERNANCE

RGC Tanzania Management Platform

Church administration workflows with structured access and permissions.

PRIVATE BUILD

03 PHARMACY OPERATIONS

Pharmacy Management System

Inventory and sales workflows for pharmacy operations and transaction records.

SOURCE AVAILABLE

04 PAYROLL

Payroll Management System

Salary processing, deductions and validation-focused payroll workflows.

SOURCE AVAILABLE

05 ONLINE MARKETPLACE

E-commerce Multi-Vendor Platform

Marketplace workflows for vendors, shoppers, orders and delivery coordination.

PRIVATE BUILD

06 SERVICE MARKETPLACE

Service Marketplace Platform

Marketplace transaction flows including escrow-style handling and disputes.

PRIVATE BUILD

HOW TO TALK ABOUT PROJECT EXAMPLES

Describe documented scope and status only. A source-available project is not automatically a current commercial offering; a private build is not a public case study.

Do not claim a named organization has adopted a system, promise a result, or share private information unless JAYTRIX has approved that statement.

Use examples to explain fit; let the technical team confirm scope and readiness.

ROLE & COLLABORATION

Business development creates and supports qualified opportunities. Commission terms must be agreed in writing before commercial work begins.

YOUR RESPONSIBILITIES

- Find relevant prospects and build professional relationships.
- Listen for business problems and record the client's needs accurately.
- Explain relevant JAYTRIX services in clear business language.
- Qualify the opportunity and coordinate a technical handover.
- Follow up on agreed actions and maintain the relationship.

OUTSIDE YOUR AUTHORITY

- Programming, implementation or architecture decisions.
- Confirming technical feasibility, scope or security outcomes.
- Promising a price, delivery date or business result.
- Offering discounts or changing payment terms without approval.
- Sharing client information beyond authorized colleagues.

PROPOSED COLLABORATION MODEL

40% OF PROJECT PROFIT

A representative may receive 40% of the profit from an eligible project attributable to a client they successfully introduced, subject to commission rules agreed by the company.

Illustration: TSh 1,000,000 – TSh 300,000 = TSh 700,000 profit; 40% of TSh 700,000 = TSh 280,000.

AGREE THESE RULES IN WRITING

Define eligible introductions, project costs, when profit is calculated, payment timing, cancellations and how shared leads are handled. The example is not a guaranteed earning.

IMPORTANT

Client payment is not the same as project profit. Calculate commission only using the costs and rules formally agreed by JAYTRIX and the representative.

Never quote a commission amount to a prospect or treat the illustration as an employment, legal or tax determination.

FINAL SALES PLAYBOOK

13 STEPS

A practical sequence for moving from a researched prospect to a trusted client relationship.

PREPARE

1–2

DISCOVER

3–5

MATCH & QUALIFY

6–8

COORDINATE

9–13

1

Find the right business

Choose an organization that may benefit from JAYTRIX services.

2

Research the business

Learn what it does and note one relevant, public observation.

3

Start a professional conversation

Introduce yourself and ask permission to discuss its work.

4

Ask discovery questions

Listen to how the client handles the process today.

5

Identify the actual problem

Record the difficulty and its effect in the client's words.

6

Match a relevant service

Suggest a possible JAYTRIX service for technical review.

7

Explain the business value

Relate the option to the need; avoid guaranteeing results.

8

Qualify the opportunity

Clarify need, decision maker, budget approach, timing and scope.

9

Involve the technical team

Share a written brief, constraints and unanswered questions.

10

Agree a follow-up

Set the next action and date with the prospect.

11

Support the proposal process

Help clarify the client's business needs and questions.

12

Confirm the approved agreement

Follow company process for scope, agreement and payment.

13

Maintain the relationship

Communicate during delivery and check in after handover.

THE CONFIRMATION RULE

Do not promise a feature, project scope, price, delivery date or security outcome until the appropriate JAYTRIX team has confirmed it.

Your role: understand the need, build trust and keep the next action clear.

PRACTICE CONVERSATION | HOTEL WEBSITE

Fictional example for training. Adapt the questions to the real client and listen carefully.

SCENARIO

A Zanzibar guesthouse answers the same room, location and booking questions in WhatsApp.

REPRESENTATIVE

Hello, I work with JAYTRIX SYSTEMS. We help organizations make useful information easier for customers to find. May I ask how guests usually learn about your rooms and services?

HOTEL MANAGER

Many people message us on WhatsApp. We send room photos and explain prices, location and what is included.

REPRESENTATIVE

Thank you. Does your team often repeat those details? Is there anything guests find hard to understand before they contact you?

HOTEL MANAGER

Yes. We answer the same questions often. Some guests ask for the location and available room types.

REPRESENTATIVE

Would it help to keep approved room details, location, photos and contact options together online? Who would provide and update that information?

HOTEL MANAGER

That could help. Our manager can provide the details, but we need to discuss what it should include.

REPRESENTATIVE

That makes sense. With your agreement, I can share what you told me with our technical team so they can discuss possible scope, timing and cost with you.

WHY THIS WORKS

The representative asks, listens, reflects the need and requests permission to hand it over.
